WORK EXPERIENCE

NVIDIA

Santa Clara, CA

Performance Engineering Intern, Edge AI

May 2026 -Present

- Developed Python benchmarking and automation tools for NVIDIA Jetson embedded AI platforms, executing and analyzing over 200,000 GPU workload runs to evaluate system performance and reliability.
- Automated the collection and analysis of latency, throughput, memory utilization, and GPU utilization metrics, accelerating performance regression detection and optimization across embedded AI workloads.
- Profiled CUDA, cuDNN, and TensorRT inference pipelines on NVIDIA Jetson devices, identifying performance bottlenecks and collaborating with software engineers to optimize real-time AI inference.

NOKIA

Allentown, PA

Software Engineering: Test Development Co-op

Jun 2021 -Aug 2021

- Improved engineering workflow efficiency by 45% through Python, C#, and PowerShell automation for Transmit/Receive Optical Sub-Assembly (TROSA) validation, software testing, and manufacturing workflows.
- Designed reusable testing frameworks and GitLab CI/CD pipelines that accelerated software release validation and improved reliability for optical networking systems.
- Accelerated root-cause analysis by evaluating TROSA manufacturing and test datasets, diagnosing hardware-software integration issues, and collaborating with cross-functional engineering teams.

NJIT Space Weather Research GPU-Accelerated Edge Computing

Newark, NJ

AI Research Intern

May 2020 - Aug 2020

- Engineered GPU-accelerated computer vision pipelines using Python, CUDA, PyTorch, and NVIDIA DeepStream, reducing real-time inference latency by approximately 40%.
- Designed benchmarking frameworks to evaluate latency, throughput, memory utilization, and GPU efficiency across embedded edge AI platforms.
- Leveraged large language models (LLMs), research literature, and experimental benchmarking to evaluate deep learning approaches and optimize real-time AI inference performance.

CIBM3 (Center for Injury Biomechanics, Materials, and Medicine Laboratory)

Newark, NJ

Research Software Engineer Intern

May 2020 - Aug 2020

- Improved engineering decision-making by developing Python and SQL pipelines that automated infrastructure reporting and dashboard updates.
- Increased firmware reliability by conducting hardware-in-the-loop tests that reproduced power disturbances and measured system response under fault conditions.
- Reduced false system triggers by implementing ADC moving-average filtering and debounce logic in embedded firmware.

EDUCATION

NEW JERSEY INSTITUTE OF TECHNOLOGY

Newark, NJ

Bachelor of Science (BS)

Expected June 2028

Major: Electrical Engineering | Dean's List: Fall 2025, Spring 2025, Spring 2026

Relevant Coursework: Data Structures & Algorithms, Object-Oriented Programming, Probability & Statistics, Linear Algebra, Computer Architecture, Digital Logic Design, Embedded Systems, Microprocessors

Certifications: OSHA 30, Stem Academy Success Certification, Mechatronics Training Program Certification, AWS Certified Developer

TECHNICAL SKILLS

Programming Languages: C++,Java, Python, R, HTML5, CSS3,JavaScript, TypeScript, SQL, Erlang

Database & Data Tools: MongoDB, MySQL, Hadoop, Tableau, Power BI, Linux, Windows

Software & Development Tools: Git, VS Code, IntelliJ, Android Studio, R-Studio, Postman, Anaconda, Docker, Jenkins **Frameworks,**

Libraries, Cloud & Design: React.js, Node.js, Next.js, jQuery, Redux, GraphQL, Express.js, EJS, Django, Flask, NPM, AJAX, RESTful Services, AWS, TensorFlow, Bootstrap, SASS/SCSS,Jest, Kubernetes, Mongoose, Figma, Adobe XD, CUDA, cuDNN, Pytorch

PROJECTS

DeepSun | *Python, CUDA, PyTorch, NVIDIA DeepStream:* Optimized GPU-accelerated edge AI inference, reducing real-time latency by approximately 40% through performance profiling and deployment optimization.

CueAI | *Python, C++, PyTorch, NumPy, Monte Carlo Simulation:* Built a physics-informed machine learning platform for predictive simulation, integrating numerical methods, statistical analysis, and reusable object-oriented software.

AI Imaging Analysis | *Python, Machine Learning, OpenCV :* Developed machine learning tools for traumatic brain injury imaging, processing biomedical datasets and evaluating predictive model performance.
